

JUVILANE HUNTSMAN

Jacksonville, FL • juviscript@gmail.com • (904) 674-5629 • portfolio.juviscript.dev • github.com/juviscript • linkedin.com/in/juviscript

PROFESSIONAL SUMMARY

Software Developer with 6 years of experience across full-stack development, front-end engineering, and IT. Skilled in building production web applications, REST APIs, and CMS-driven platforms using Java, PHP, JavaScript, TypeScript, and SQL. Comfortable working across the stack — from database design and back-end services to dynamic front-end components and CMS customization. Proven ability to deliver reliable, maintainable software in cross-functional environments and to pick up new tools and technologies quickly.

TECHNICAL SKILLS

Languages: Java, JavaScript, TypeScript, PHP, C#, SQL, HTML5, CSS3

Frameworks & Libraries: Spring Boot, Vue 3, JavaFX, Bootstrap, REST API

CMS & Front-End Tools: WordPress, Elementor, Umbraco/GovStack, Chrome DevTools, GA4, Cookie Consent Mode

Cloud & DevOps: AWS (EC2, RDS, Lambda, Elastic Beanstalk), Docker, Git, IIS, Windows Server

Databases: SQL Server, PostgreSQL, MySQL | **Other:** Active Directory, SSRS, PlatformIO, Serial Communication (jSerialComm)

PROFESSIONAL EXPERIENCE

Solutions Developer II | Hernando County Clerk of Circuit Court & Comptroller | *Oct 2023 – Present*

- Design, build, and maintain production web applications and internal tools using PHP, JavaScript, Java, and SQL Server — including a custom Document Management System that reduced department costs and improved workflow efficiency
- Develop and deploy REST APIs and dynamic front-end components following full software development lifecycle practices, from requirements through QA and ongoing maintenance
- Build and customize CMS-driven web experiences in WordPress and Umbraco/GovStack, writing custom CSS, JavaScript, and PHP to extend functionality beyond template defaults while maintaining clean code hygiene
- Implemented a Google Analytics consent mode integration with a custom cookie consent banner, handling conditional script loading and GA4 event tracking validation across user consent states
- Conduct structured QA prior to every launch including responsive validation, cross-browser testing (Chrome, Firefox, Safari, Edge), form submission testing, and link verification
- Use Chrome DevTools to diagnose layout issues, JavaScript conflicts, API/network failures, and third-party script interference — isolating root causes rather than applying surface-level fixes
- Maintain 15+ internal codebases, resolving defects and collaborating cross-functionally with legal, administrative, and IT stakeholders to deliver reliable, on-time software

Regional Support Technician | Fidelity Investments | *Mar 2021 – Oct 2023*

- Provided Level 2 technical support to 1,000+ associates across regional operations, ensuring system reliability and minimizing downtime
- Maintained IT infrastructure including Active Directory, Windows Server, and network systems; collaborated with distributed teams to resolve complex technical issues
- Applied systematic troubleshooting and clear written and verbal communication to resolve high-volume support requests efficiently

EDUCATION

B.S. Software Engineering — Western Governors University | *Dec 2025*

Back-End Software Development in Java Certificate — Kenzie Academy / Amazon Technical Academy (via SNHU) | *Oct 2023*

Amazon-backed backend engineering program; built production-grade applications using Java, Spring Boot, AWS Lambda, and Docker

Associate in Arts — Florida State College at Jacksonville | *Jun 2017*

CERTIFICATIONS

- AWS Certified Cloud Practitioner [View Credential](#)
- CompTIA Project+ [View Credential](#)
- ITIL 4 Foundation [View Credential](#)
- CJIS Security Awareness Certification

NOTABLE PROJECTS

JuviScript Portfolio portfolio.juviscript.dev/ — OS-style interactive portfolio built in Vue 3 and TypeScript with Vite. Features minimizable/maximizable desktop windows, desktop icons, a custom music widget with interaction-triggered autoplay, a BIOS boot sequence with state management, and a dedicated Android-style mobile/tablet view.

Compass — Custom RP2040 firmware written in C using TinyUSB and PlatformIO, implementing a USB HID device that translates joystick input into configurable keyboard events — the hardware foundation for the Compass-Meridian ecosystem. (Private repository)

Compass-Meridian github.com/juviscript/compass-meridian — Java/JavaFX desktop application that pairs with the Compass hardware over serial (jSerialComm), enabling users to configure joystick-to-keyboard key mappings and manage presets through a full GUI — bridging embedded firmware and desktop software.

Know — Internal knowledge management system built in PHP/Fat-Free Framework for county staff. Features a hierarchical Cabinet → Drawer → Folder → Article content structure, role-based access control scoped per cabinet, full article versioning and revision history, peer review and approval workflows, acknowledgement tracking, and auto-provisioned personal workspaces on user creation. (Internal)

GigHub — Spring Boot / MySQL concert tracking app deployed to AWS Elastic Beanstalk with RDS, custom subdomain routing, and CI/CD workflow (WGU Capstone).
